

Test Preparation Courses

- People of practically all ages and careers face tests of their academic and professional performance. Along with many parameters used to evaluate whether a person should be accepted to college/university or given a job, test scores play important role in this process. We can argue and say that they are not the major factors. Of course. However, it's better to have high scores and work to improve low scores in order to face more challenging opportunities. The School of Theoretical Modeling, as many other universities, considers applicant's scores as one of the characteristics of student's performance. Test preparation courses organized at School help students to achieve high scores and become efficient test takers. Students who took test preparation courses at our School also are studying at University of Maryland, Virginia Tech, Harvard, Yale, Cornell, Stanford, Georgetown, Duke, Boston College, Howard, University of Richmond, American University, George Washington University, Montgomery College and other places.
